12. SOME NEW BIRD RECORDS IN THE PALNI HILLS,
SOUTH INDIA

In the last week of October 1954, I had the opportunity of making a small collection of birds around Shembaganur, 6,000 ft. elevation in the Palni Hills. These have been identified by the Society and I am informed that the following are not listed by Fairbank and Terry from this area (*Stray Feathers* Vol. 5, Pp. 387-410 & Vol. 10, Pp. 467-480):

Microtarsus poioicephala in foothills ca. 1000'.

Rhipidura aureola compressirostris. (In the Eastern Ghats Report, JBNHS, Vol. 36, Pp. 92, Whistler doubted Fairbanks's record since the latter had omitted *R. pectoralis*).
